

David Tsofin

Senior Backend Engineer | Technical Lead | AI Systems

Bratislava, Slovakia (EU work permit, contracting via own entity) | tsofindavid@gmail.com | [LinkedIn](#) | [PDF Version](#)

Professional Summary

Backend engineer and technical lead with 6+ years building distributed systems for enterprise B2B SaaS, primarily on Node.js/TypeScript. Technical lead for the backend of an enterprise Salesforce DevOps platform, owning architecture, API design, data consistency and production reliability. Design and ship LLM-based systems end-to-end: AI agents, RAG, MCP integrations, human-in-the-loop document automation. Full-stack on own products (React, Vue.js).

Technical Skills

Languages: TypeScript, JavaScript, Go, Java, Python, C#, SQL **Backend:** Node.js, NestJS, Express, Spring Boot, ASP.NET Core, REST, gRPC, microservices, event-driven architecture, RabbitMQ **Frontend:** React, Vue.js, Electron.js **AI & Data:** LLM applications, AI agents, RAG, MCP, vector search (Qdrant, pgvector), prompt engineering, human-in-the-loop workflows **Databases & Storage:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Amazon S3 **Cloud & Infra:** AWS (Lambda, ECS, S3, RDS), Docker, Prometheus, Grafana, ELK, Kubernetes and Terraform (working knowledge) **Security & Integrations:** OAuth2, OIDC, SAML, access control, Salesforce (SOQL, Apex, Metadata API, sfdx)

Professional Experience

Success Craft — Backend Engineer → Technical Lead

Feb 2022 – Present | Remote (B2B contract)

Enterprise Salesforce DevOps platform (B2B SaaS): Git-like release and change management for Salesforce. ~100-person company, ~50 engineers.

- Grew from backend engineer to technical lead of a ~30-person product team (~15 backend); mentored 5 engineers to independence, run performance reviews
- Designed the Git-like change-tracking storage: metadata in PostgreSQL, client data in S3, hundreds of GB processed daily
- Led architecture of a ~2-year migration of several hundred enterprise clients from a native DevOps product to the cloud platform
- Designed the public REST API, Salesforce and ServiceNow integrations, and OAuth2/OIDC/SAML enterprise authentication
- Built an MCP layer over existing services without modifying them: full API coverage, composite task-level tools, pre-call validation
- Technical contact for enterprise clients and presales; built AWS infrastructure emulating a Fortune 500 client's private network for its security requirements

Stack: Node.js, NestJS, TypeScript, PostgreSQL, MySQL, AWS (Lambda, ECS, S3, RDS), RabbitMQ, MCP, Docker, Kubernetes, Terraform, Prometheus, Grafana

Independent Consulting & Product Development — Founder / Engineer

- **Social Network Sales With AI** — SaaS AI agent for Instagram DMs, built solo in ~6 weeks: learns the account's style, answers routine messages by user-defined scenarios, routes the rest to a human. In production. *Go, React*
- **Tender document automation** (client) — AI pipeline turning 20–30 pages of tender requirements into submission-ready documents from client DOCX templates; AI-edited content is marked for review. Cut preparation from ~5 hours to 30 min per document. *Node.js, Telegram Bot API*
- **Legal knowledge base for AI agents** — semantic search over current and historical versions of legislation, exposed to AI agents via MCP; ingestion pipeline, REST API, web frontend, access control. *Java, Spring Boot, Qdrant, pgvector, Vue.js*

Whale Studio — Backend Engineer

Jun 2021 – Feb 2022

- Built a real-time multiplayer game backend on WebSockets (Socket.io)
- Reduced latency and raised throughput of high-traffic e-commerce systems with Redis caching and PostgreSQL query optimization

Stack: NestJS, Socket.io, PostgreSQL, Redis

Alpha Orion — Full-Stack Developer

Sep 2019 – Jun 2021

- Built backend for a UAV fleet management platform (fleet state, telemetry, mission data)
- Built industrial hardware-testing tooling across backend, Electron.js desktop client and Arduino layer, applying a mechanical engineering background

Stack: ASP.NET Core, C#, PostgreSQL, RabbitMQ, JavaScript, Electron.js, Arduino

Education

Slovak University of Technology, Bratislava — BSc, Applied Informatics (*2024 – Present*)
Belarusian National Technical University — IT and Robotics (*2018 – 2020*)

Languages

English — Professional working proficiency | Slovak — B1 | Russian — Native
